NIRIUM WATCH

A 402 is a promise. A settled transaction is proof.

PITCH STEP 01 / 04

THE SOLUTION

A monitor that pays x402 APIs like an agent, then proves the money moved.

- Pays each x402 endpoint on Stellar testnet with a real payment, every 30 min.
- Checks on-chain (Stellar RPC) that the right amount reached the right address. A 402 alone is not enough.
- Signs every round as a receipt on IPFS and alerts on state changes through Pullcord.

👉 **Think:** Why does it matter? Because a facilitator can stay broken for weeks while every endpoint still answers a perfect 402.

PITCH STEP 02 / 04

PMF

The problem is real on Stellar. The users are not here yet.

- OpenZeppelin facilitator issue #47: a ~32-day outage, found by hand by 4 separate integrators.
- SCF #45 just funded 3 Stellar x402 facilitators (Rail402, AgentSmith, Rumble Fish). More sellers and agents will depend on them.
- Honest status: no external users yet. Every payment is ours, on testnet.

👉 **Think:** Who should care? x402 sellers ("am I getting paid?"), agent builders ("should my agent pay here?") and facilitators ("is settlement healthy?").

PITCH STEP 03 / 04

TECHNICAL WORKFLOW

Probe → Pay → Verify → Sign → Alert.

- Probe: request without payment and expect a 402 with requirements. Pay: use the x402 client with a testnet key. Verify: call getTransaction and check the SAC transfer to payTo for the exact amount.
- Sign: hash the round's results, sign with ed25519 and pin to IPFS (nirium-audit-v1). Alert: send an HMAC-signed alert to Pullcord.
- Fly.io worker, history.json on GitHub, static status page on Vercel. 87 checks, 72 settled and verified, 3 facilitators.

👉 **Think:** Why can you trust it? Every claim on the page links to a Stellar transaction or a signed receipt anyone can check.

PITCH STEP 04 / 04

THE TEAM

Two builders from Mexico, remote.

- Giovanny Amador, Engineering Lead: monitor core, on-chain verification, receipts, Fly worker, alerts.
- Monserrat Mendoza, Dev Lead: status page redesign, AgentSmith seller.
- Built during HackMeridian on top of our own prior work, disclosed (Nirium client and receipt format, Pullcord alerts).

👉 **Think:** Why us? We hit this problem ourselves: we listed a payment method as "live" that had zero settled payments. This is the tool we wished we had.
